Open and Solid Cap

## 2ml Crimp Vial, 12x32mm, 11mm Neck, Flat base

The wide opening crimp cap provides a larger target area for improved autosampler needle accuracy. Select from numerous cap colors and a variety of septa. Whatever your crimp top vial needs, Mastelf has what you are looking for.

- 2ml 11 mm Opening, Crimp Type
- Compatible with 11x1mm PTFE Silicone and Viton Septa  
Aluminum Crimp Cap
- Viton Septa more stable than PTFE Silicone If Working  
Temperature  $\geq 200$
- Tightly controlled crown for improved crimping
- Precision-formed neck for improved autosampler handling

## Headspace Vial

- Mastelf provide proper thickness which ensures even heat distribution for consistent sampling reliability
- Choice of crimp or screw-top vials
- Have a combination of Flat or rounded bottom
- Beveled top for a maximum secure seal
- Available in writing on spot designs

## 24-400 EPA VOA Vial

- Open top screw cap used for sample retrieval with a syringe
- Available in solid screw cap or open top screw cap
- Vials and caps are autoclavable design
- Choice of solid or open top phenolic screw cap
- These vials can also be used as storage vials.
- Provide constant pH for duration of sample storage life
- A clean work environment production, improve products reliability
- A perfect standard working for EPA CFR 136 and EPA40 CFR 141

## REAGENT BOTTLE AND SAFETY CAP

1. We have size available from 25ml to 2000ml in amber and clear color.
2. Temperature resistant up to +140°C
3. Lab reagent storage bottle is also called media bottle, which is optimal for storing biological fluids, reagent, culture media and a multitude of other non-aqueous and aqueous solutions.
4. Available in GL25, GL32 and GL45 screw threads.
5. Stainless steel safety cap available.

# Chemical Property Sheet

## PTFE

- A Very high standard of solvent resistance.
- Do not use before or after the injection of the sample storage
- No Reuse, one time using only.
- More economically septa.
- High working temperature @ 260℃.

## PTFE/硅胶垫片 ( PTFE/Silicone Septa)

- Used for before or after the injection of the sample storage
- Autoclavable and coring with superior tolerance
- Before Penetration being a PTFE chemically inert.
- Working temperature Varies from -40°C~260°C

## 预切口 PTFE/硅胶垫片 ( PTFE/ Silicone Septa Pre-slit)

- Prevent or reduce needle damage.
- For preventing the formation of vacuum in the Vials
- Working temperature Varies from -40°C~260°C

## PTFE/硅胶垫片/PTFE ( PTFE/Silicone/PTFE)

- High standard sealing, recommend for penetrating repeatedly.
- Autoclavable and coring with superior tolerance
- Used for before or after the injection of the sample storage
- Working temperature Varies from -40°C~260°C

## PTFE/橡胶 ( PTFE/Rubber )

- Economically using.
- No Reuse, one time using only.
- Don't use or storage to penetrate repeatedly for further analysis
- Working temperature Varies from -40°C~260°C

# Autosampler Compatibility Table

As indicated in the table, there are various models of Mastelf vials that are compatible with autosamplers. There are some autosamplers that require optional vial trays and, in some cases, programming upgrades to accommodate all the vials listed. The **X** mark indicates that vials from this category can be used with the autosampler in most configurations.
